NOTICE

The following notice of intent to construct, submitted in accordance with Section R307-401-1, Utah Air Conservation Rules, has been received for consideration by the Executive Secretary, Utah Air Quality Board:

Sunnyside Cogeneration Associates

Location: Route 123, # 1 Power Plant Road, Sunnyside, Utah, Carbon County

Project Description: Sunnyside Cogeneration Associates (SCA) owns and operates a waste coal electric generation plant located on Route 123, Sunnyside, Carbon County. SCA has requested an amendment to their current approval order DAQE-586-99, to incorporate clarifications and conditions regarding the associated ash landfill operation. The landfill is located on property leased from the City of East Carbon which is located approximately one mile West of the generation facility. The landfill receives ash from the combustion of the high-ash waste coal tailings which are reclaimed from the closed Sunnyside Mine site. Emissions attributable to the ash landfill, mainly fugitive dust, are controlled through the use of watering, compaction, terracing and re-vegetation. An enhanced PSD modeling analysis was performed in accordance with previous Approval Order requirements which accounted for fugitive dust emissions associated with the existing ash landfill. SCA's ash landfill and other facility installations have been in commercial operation since 1993, therefore, there is no increase in fugitive dust emissions (actual or allowable) associated with this notice. The Utah Division of Air Quality intends to amend SCA's existing Approval Order to include more specific conditions for the landfill operation, including the requirement for developing a fugitive dust control plan. A 30-day public comment period will be provided for accepting comments regarding the fugitive dust control plan.

The engineering evaluation and air quality impact analysis have been completed and no new violations of National Ambient Air Quality Standards or Prevention of Significant Deterioration Increments will occur. It is the intent of the Executive Secretary to approve the construction project.

The construction proposal and estimates of the effect on local air quality are available for public inspection and comment at the Division of Air Quality, Utah State Department of Environmental Quality, 150 North 1950 West, Salt Lake City, Utah 84114-4820. There will be a 30-day comment period held. Written comments received by the Division, at the same address on or before August 7, 1999, will be considered in making the final decision on the approval/disapproval of the proposed construction.

If anyone so requests to the Executive Secretary at the Division in writing, within 15 days of publication of the Notice, a hearing will be held to explain the project and technical rationale for proposed action. A hearing will be scheduled as close as practicable to the proposed project location. Comments obtained during a hearing will be evaluated and considered by the Executive Secretary before making a final decision on the approval/disapproval of the project.

Date of Notice: July 8, 1999
